

conservative restoration of anterior pdf

A dental restoration or dental filling is a treatment to restore the function, integrity, and morphology of missing tooth structure resulting from caries or external trauma as well as to the replacement of such structure supported by dental implants. They are of two broad types—direct and indirect—and are further classified by location and size. A root canal filling, for example, is a ...

Post-traumatic knee stiffness and loss of range of motion is a common complication of injuries to the knee area. The causes of post-traumatic knee stiffness can be divided into flexion contractures, extension contractures, and combined contractures.

Post-traumatic knee stiffness: Surgical techniques

Abstract. Anterior cruciate ligament (ACL) tears are a common injury, particularly in the athletic and youth populations. The known association between ACL injury and subsequent osteoarthritis (OA) of the knee merits a more in-depth understanding of the relationship between the ACL-injured knee and osteoarthritis.

A bridge is a fixed dental restoration (a fixed dental prosthesis) used to replace one or more missing tooth by joining an artificial tooth definitively to adjacent teeth or dental implants.. A bridge will span the area where teeth are missing. They are attached to the natural teeth or implants that surround this space. The natural teeth or implants which support the bridge are called abutments.
