Abstract - Experimental liquid-liquid equilibria of the water-acetic acid-butyl acetate system were studied at temperatures of 298.15 ± 0.20 , 303.15 ± 0.20 and 308.15 ± 0.20 K. Complete phase diagrams were obtained by determining solubility and tie-line data. The reliability of the experimental tie ...

Relationship Between Structure and Strengths of Acids Brønsted-Lowry acids are H^+ donors . . .so. . . acid strength is dependent on how readily donated the acidic H^+ is the weaker the interaction between $A-H$ (in binary acids) or $O-H$ (in oxoacids), the stronger the acid

Due to the presence and significance of alumina in the natural aquatic environment and its increasing application in drinking and wastewater purification, the knowledge of the structure of alumina and its possible interactions with organic and inorganic compounds in water are of great importance.

Titration, also known as titrimetry, is a common laboratory method of quantitative chemical analysis that is used to determine the concentration of an identified analyte. Since volume measurements play a key role in titration, it is also known as volumetric analysis. A reagent, called the titrant or titrator is prepared as a standard solution. A known concentration and volume of titrant reacts ...

Surface tension can be defined in terms of force or energy. In terms of force: surface tension \hat{F}^3 of a liquid is the force per unit length. In the illustration on the right, the rectangular frame, composed of three unmovable sides (black) that form a "U" shape, and a fourth movable side (blue) that can slide to the right.
