

klug concepts of genetics pdf

In genetics, a mosaic (or mosaicism) means the presence of two different genotypes in an individual which developed from a single fertilized egg. As a result, the individual has two or more genetically different cell lines derived from a single zygote. Mosaicism may result from: Unusual events in cell division (). A gene mutation during development; A chromosomal mutation during development

Mosaic (genetics) - Simple English Wikipedia, the free

In genetics, an operon is a functioning unit of DNA containing a cluster of genes under the control of a single promoter. The genes are transcribed together into an mRNA strand and either translated together in the cytoplasm, or undergo splicing to create monocistronic mRNAs that are translated separately, i.e. several strands of mRNA that each encode a single gene product.

Operon - Wikipedia

Assistant Professor of Practice Non-Majors Biology: Human Biology and Lab (BIOL 126 & 126L), Concepts of Biology and Lab (BIOL 111 and 111L). Research interests include how teaching techniques used in the classroom affect student learning.

A trait or character in biology is a feature of a living thing. It is part of an organism's phenotype. Every living thing, from tiny organisms like bacteria, to plants, animals and humans, has some characteristics which make it special. Thus an elephant has tusks, large size and weight, large ears and very large molar teeth (). These are typical characters of the African and Indian elephants.

Trait - Simple English Wikipedia, the free encyclopedia

Non-Mendelian inheritance is a general term that refers to any pattern of inheritance in which traits do not segregate in accordance with Mendel's laws. These laws describe the inheritance of traits linked to single genes on chromosomes in the nucleus. In Mendelian inheritance, each parent contributes one of two possible alleles for a trait. If the genotypes of both parents in a genetic cross ...
