Magnetohydrodynamics (MHD; also magneto-fluid dynamics or hydro-magnetics) is the study of the magnetic properties and behaviour of electrically conducting fluids. Examples of such magneto-fluids include plasmas, liquid metals, salt water, and electrolytes. The word "magneto-hydro-dynamics" is derived from magneto-meaning magnetic field, hydro-meaning water, and dynamics meaning movement.

In physics, a shock wave (also spelled shockwave), or shock, is a type of propagating disturbance that moves faster than the local speed of sound in the medium. Like an ordinary wave, a shock wave carries energy and can propagate through a medium but is characterized by an abrupt, nearly discontinuous, change in pressure, temperature and density of the medium.
